

I'm really excited to be working Dr. Metcalf and Kevin this summer. When I'm not working with optics, I'm on my bike in the woods, messing with computer hardware, coding, or learning music on my guitar. Though when Its all said and done, I love learning how 'things' interact on a fundemental level.

I'm thrilled to be working with the LTC this summer. And I hope to continue the skills I have learned in the future on other projects.
