

Hi! My name is Carlos, and I'm a rising senior at Ransom Everglades School in Miami, Florida. My passion for physics, and particularly astrophysics, started with an obsession with astronomy from a young age. My project at the LTC this summer revolves around the use of white-light interferometry to analyze the surfaces of optical instruments. Outside of the lab, I love playing rugby, football, and lacrosse, and I am also an avid saxophone player and music nerd. Additionally, I love cooking, baking, and eating new foods from a wide variety of cultures and cuisines. In college, I hope to study physics with a minor in sport administration.
