

I'm Megan Ferland and I'm a rising junior at Colby College in central Maine. I grew up in New York City. At Colby, I major in Physics with minors in Data Science and French & Francophone Studies. I have loved shadowing in the optics lab at Colby and I am excited to join the AMO team at Stony Brook this summer. This summer, I hope to gain experience from the Laser Teaching Center and in Dr. Metcalf's laboratory. I am excited to gain more hands-on experience with optical equipment. In the future, I will pursue both physics and engineering in a combined dual-degree program at Colby and Dartmouth. In my free time, I enjoy playing volleyball, reading, and sewing.
